

# USER Guide - Make My Lab(MML)

IIHT Cloud Labs (MML) helps you access real time virtual machines. That includes configurations as per the requirement.

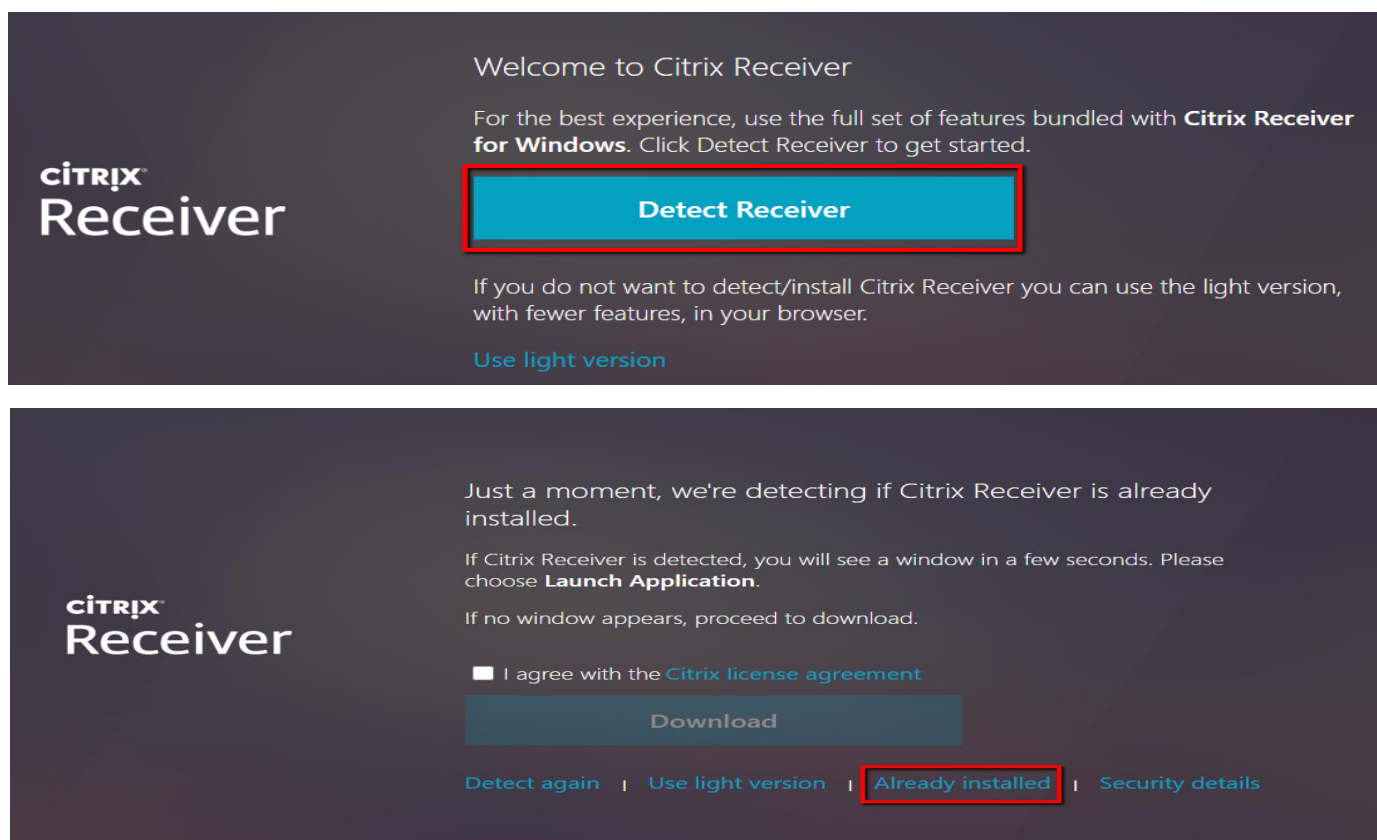

Step 1: Click the login URL - <https://mml.iiht.tech>

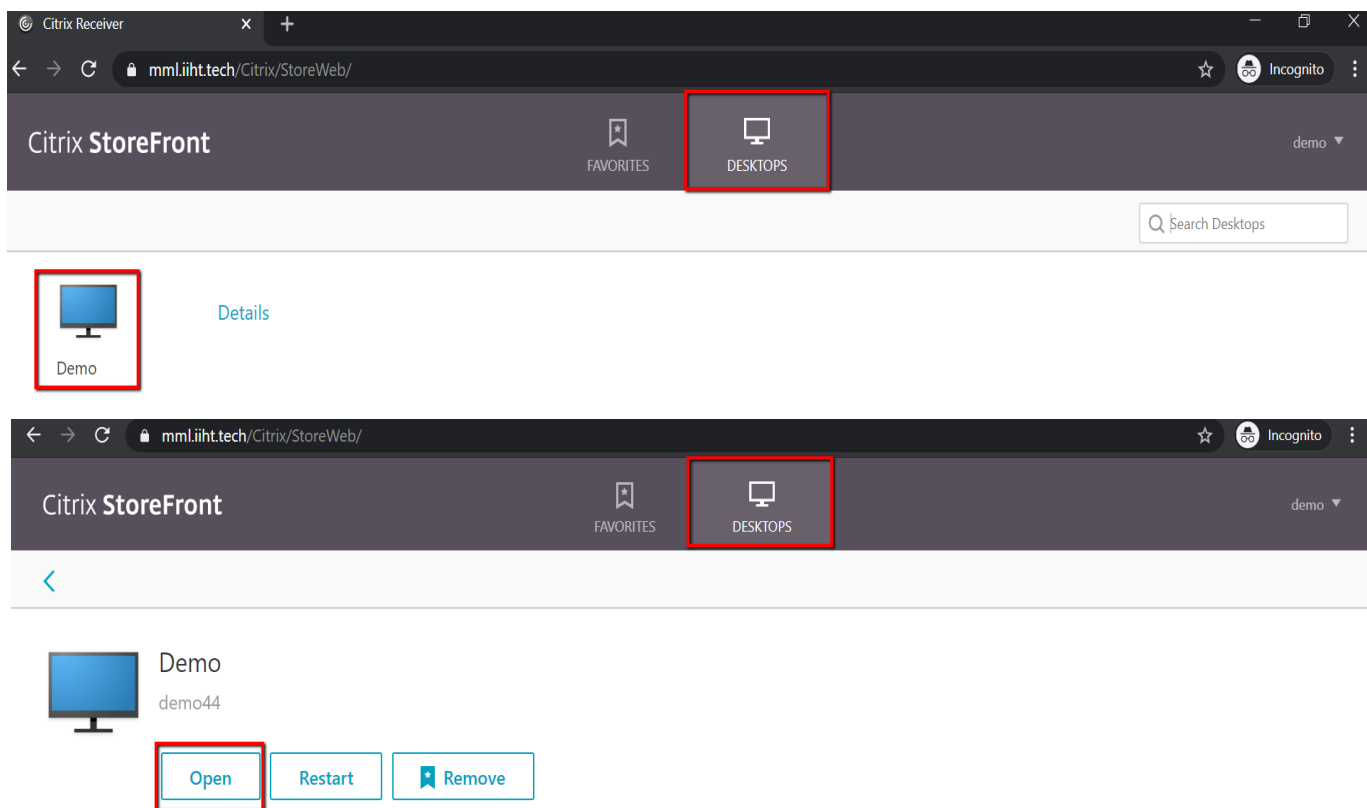

Step 2: After login, you will get the below page. Click on “USE LIGHT VERSION”.

Step 3: If you have receiver installed click on Detect Receiver and select already installed.

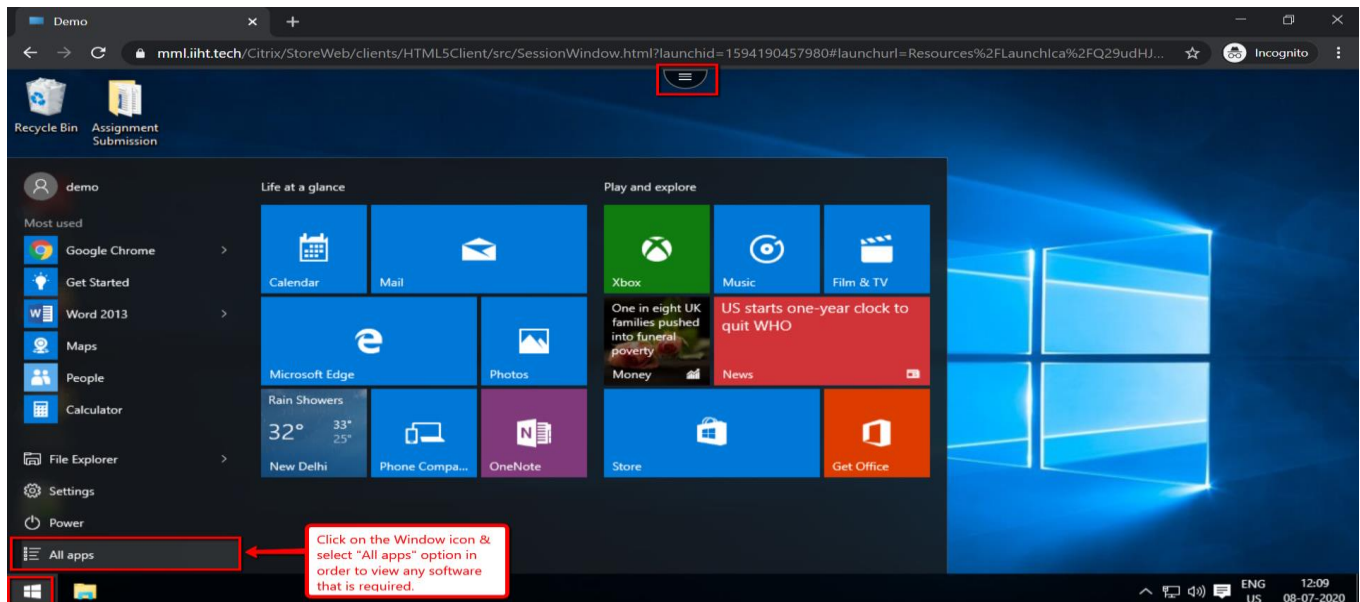

Step 4: If Citrix receiver is not installed click on "Use Light version". In both the cases you will land at the below page. Click on "Desktop Icon" and Select your assigned "Virtual Machine" by clicking on icon directly or click on details and then click "Open"

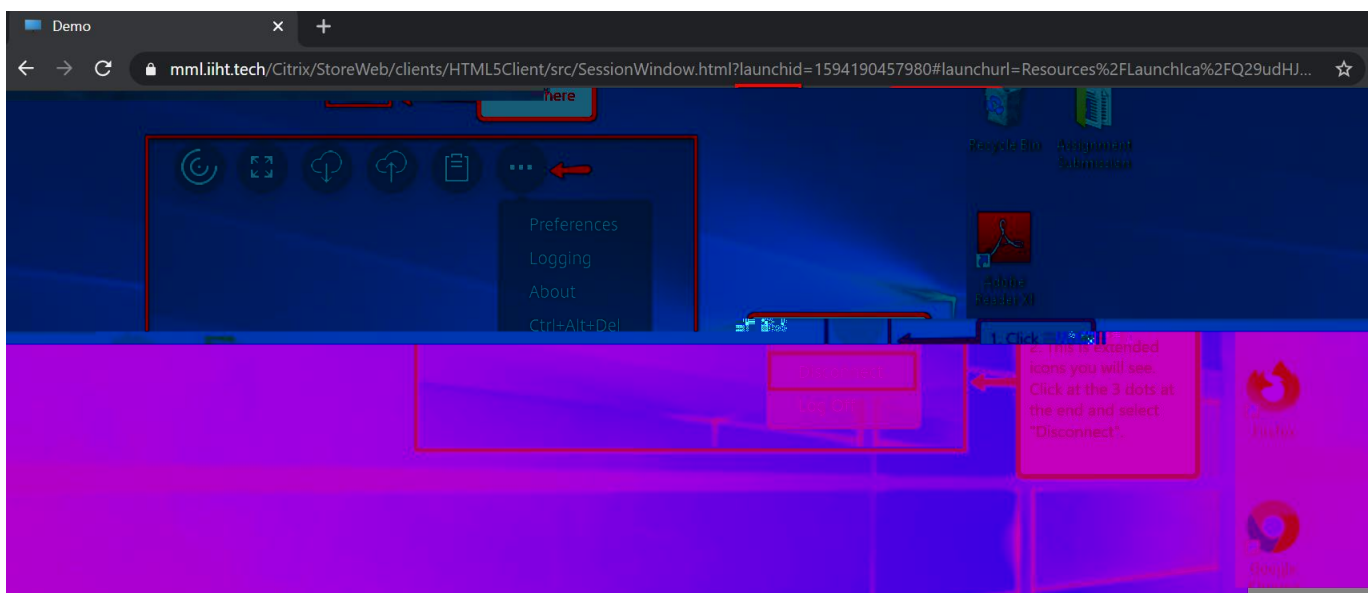

**NOTE: The system will take 4-5 minutes to boot at the very first time**

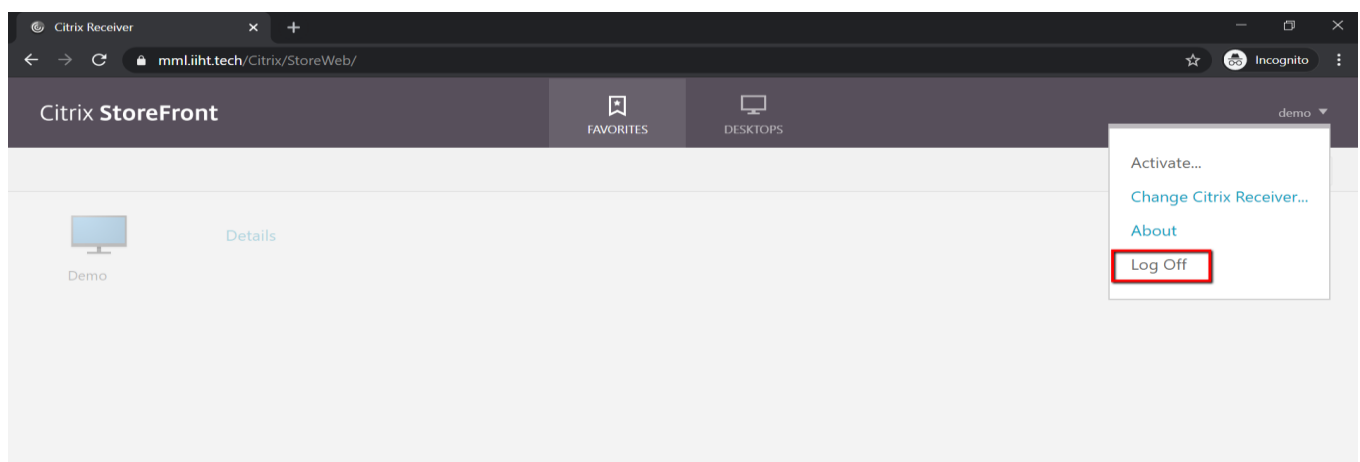

Step 5: After entering your lab credentials, you will be redirected to the windows page.  
The required software in order to perform/ practice assignments to be present @ All Apps menu

Step 6: Please mandatorily disconnect your VM's after every use.

Step 7: And then log off your citrix machine.

## **FEW GUIDELINES**

1. Once you login to the MML account – you would have to wait for a minute and then click on VDI icon to void all the chances of facing error message such as "Unable to connect" as the system takes time to boot for the very first time you are trying to access the cloud lab.
2. In case you receive the error message, you can try to login again by clearing your browser cache cookies OR by using incognito browser.
3. Avoid to click multiple time on the VDI icon as a result it will generate multiple power-on task on the backend making the booting process of the VM more delayed. Hence request you to click only once on icon and wait for system to respond.
4. Incase if there is longer wait time post following the above instructions, please report the concern to [labsupport@iiht.com](mailto:labsupport@iiht.com) with [login credentials and error screen shot](#).
5. At times extra whitespace is added while using copy-paste the credentials. Hence please be sure to copy-paste the details correctly in order to avoid incorrect credentials error message or always a good practice to go with typing.
6. Regarding the usage - The metering starts as soon you get landed @ the VM login screen.
7. The usage stops post disconnection of the VM.
8. In case if the VM is left idle for more than 20 minutes, it will take the suspend mode and usage is not metered.

**THANK YOU!!**
